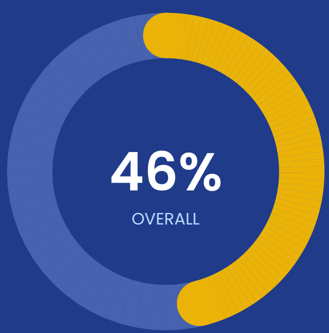
CAPITAL READINESS ASSESSMENT

Loco Financial Technologies

An independent evaluation of investment readiness across commercial, financial, operational and legal domains — with a structured 18-month improvement roadmap.



OVERALL READINESS SCORE

Below the 70% investment-readiness threshold

Not yet investment ready

Prepared on 8 July 2026 · Dar es Salaam, Tanzania

Confidential · CRAT Framework

01 Company Profile

Who Loco Financial Technologies is, and the context of this capital readiness assessment.

COMPANY OVERVIEW

Loco Financial Technologies is a Financial Technology company operating in Tanzania. This report evaluates its readiness to raise external capital across four domains — commercial, financial, operational, and legal & compliance — using the Capital Readiness Assessment (CRAT) framework, and sets out the roadmap required to reach investment readiness.

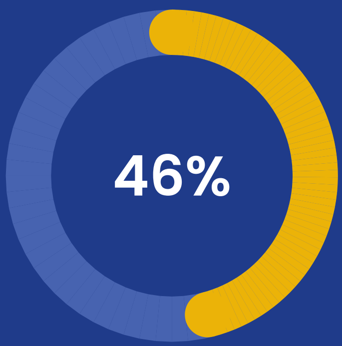
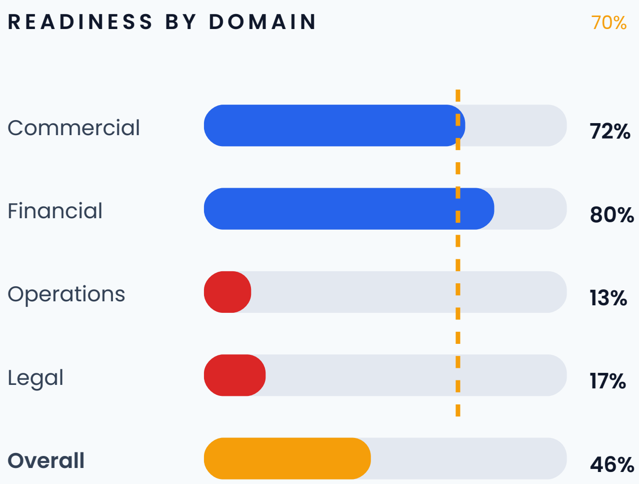
READINESS LEVEL



Not Ready

READINESS BY DOMAIN



READINESS LEVEL

Loco Financial Technologies achieved an overall Capital Readiness Score of 46%, placing it at the "Progressing" maturity level. Commercial and Financial are investment-grade. Operations and Legal carry the highest-risk capability gaps. Overall the business is not yet investment-ready; the sections that follow detail the thematic gaps, domain findings and recommended interventions.

03 Key Thematic Gaps

The defining capability gap in each domain, with a short tailored read on what it means for investment readiness.

Commercial / Market 72% ON TRACK

Revenue is being generated, but the commercial engine runs on informal routines. Without a documented pipeline, positioning and retention mechanics, investors cannot yet rely on the predictability of future revenue.

Financial Management 80% ON TRACK

Core financial management is functioning, but reporting and forecasting are not yet at the standard investors expect. Cash-flow visibility and investor-grade records are the main constraints on financial credibility.

Operations 13% HIGH RISK

Operational delivery works at current scale but depends on undocumented, person-dependent routines. This limits resilience and the ability to scale without disproportionate execution risk.

Legal & Compliance 17% HIGH RISK

Foundational legal structures exist, but governance, contracts and compliance records are incomplete. These gaps are the most likely to stall investor due diligence.

04 Detailed Findings

Domain-by-domain observations recorded during the assessment.

Commercial / Market

72%

- The sales process and revenue pipeline operate without documented stages or conversion tracking.
- Market positioning and competitor intelligence are understood informally but not documented.
- Customer acquisition and retention channels lack measurable targets and controls.

Financial Management

80%

- Cash-flow forecasting is not formalised into a rolling model.
- Financial records are maintained but not yet investor-grade or independently reviewed.
- Accounting systems and management reporting need stronger controls and cadence.

Operations

13%

- Core operating processes and standard procedures are not documented.
- There is significant key-person dependency across critical functions.
- Performance is not consistently tracked against defined KPIs.

Legal & Compliance

17%

- Licences, permits, contracts and governance records require review and consolidation.
- Compliance gaps remain that could delay or complicate due diligence.
- Intellectual property and formal oversight structures are not fully established.

05 Recommendations

Targeted capacity interventions to close the gap in each domain.

Commercial / Market

- Document the end-to-end sales process with defined stages, owners and conversion metrics.
- Maintain a living market-positioning and competitor-intelligence brief.
- Adopt CRM-based pipeline tracking with acquisition and retention KPIs.

Financial Management

- Implement accounting software with disciplined monthly management accounts.
- Build and maintain a rolling 12-month cash-flow forecast.
- Prepare investor-grade financial statements and arrange independent review.

Operations

- Document core processes and standard operating procedures.
- Reduce key-person dependency through delegation and succession planning.
- Define operational KPIs and link them to performance management.

Legal & Compliance

- Review and consolidate licences, permits and key contracts.
- Close compliance gaps and formalise governance and oversight structures.
- Register intellectual property and document board and decision rights.

06 Prioritisation

Quick wins are high-impact actions requiring fewer resources — sequence them first. Bold plays require more effort but deliver greater readiness gains, sequenced across the 3–18 month programme.

QUICK WINS

High impact · fewer resources

1. Formalise financial records
2. Confirm licences & permits
3. Document core processes

BOLD PLAYS

Greater effort · greater readiness gains

4. Implement CRM pipeline
5. Build cash-flow forecast
6. Prepare audited financials
7. Establish governance structure
8. Register IP assets

SEQUENCING

Sequencing follows impact and investor relevance: stabilise the highest-risk domains first with the quick wins, then build the durable controls — CRM, audited financials, governance and IP — that carry the business past the 70% readiness threshold.
